Objective

Seeking a position as a Fullstack Developer, focusing on Mid-level or Junior web development roles.

Highlights

Optimization and creation of automated testing workflows.

Fullstack development on Chuva Inc. projects serving thousands of daily users in the academic and research environment.

Architecture and documentation of pitches using the Shape Up methodology, focusing on developer autonomy.

Optimization of complex queries and management of relational databases in production environments.

Web scraping for data migration between different websites.

Documentation of company processes and proprietary modules in projects.

Experience

Chuva Inc. - Junior Developer (June 2022 - present)

Started as a Front-end Developer in June 2022 and promoted to Junior Fullstack Developer in June 2024. Development and maintenance of scalable APIs using PHP, implementation of E2E and unit tests in automated workflows to ensure stability of continuous deployments, and front-end development using Angular.

InfoJr: UFBA Junior Computer Science Enterprise - Multiple roles (March 2019 - February 2022)

A 3-year journey with career progression, starting as a Trainee in the People Management Directorate, advancing to People Management Advisor, and then People Manager.

Responsibilities included People Management activities, front-end development in React projects, and back-end development in Laravel projects. Concluded my work at the junior enterprise as a Front-end Designer, with a total focus on the development team.

Education

Federal University of Bahia (UFBA) - January 2019 - present

Bachelor's Degree in Computer Science. Participated as Staff in the UFBA Computer Science Week 2019. Completed my final project on the research and implementation of Learned Indexes for similarity queries in multidimensional data. Focused on performance optimization and computational cost reduction in large databases; expected graduation in semester 2026.1.
